

RF exposure Estimation

1. Introduction

Product:	POS
Model no.:	JioPay 2800
Brand Name:	JioPay
FCC ID:	2AFXJ-JIOPAY2800
Modulation:	ASK
Operational Frequency	13.56MHz

2. Limit and Guidelines on Exposure to Electromagnetic Fields

According to §15.247(e)(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

According to KDB 447498 D01 Mobile Portable RF Exposure v05r02, no SAR required if power is lower than the flowing threshold:

At frequencies below 100 MHz, the following may be considered for SAR test exclusion, and as illustrated in Appendix C:

- The power threshold at the corresponding test separation distance at 100 MHz in step 2) is multiplied by $[1 + \log(100/f(\text{MHz}))]$ for test separation distances > 50 mm and < 200 mm
- The power threshold determined by the equation in a) for 50 mm and 100 MHz is multiplied by $\frac{1}{2}$ for test separation distances ≤ 50 mm
- SAR measurement procedures are not established below 100 MHz. When SAR test exclusion cannot be applied, a KDB inquiry is required to determine SAR evaluation requirements for any test results to be acceptable.

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

3. Calculation method

RF Transmission Frequency: 13.56MHz

According to the follow transmitter output power (Pt) formula:

$$P_t = (E \times d)^2 / (30 \times g_t)$$

Pt=transmitter output power in watts

gt=numeric gain of the transmitting antenna (unitless)

E=electric field strength in V/m

d=measurement distance in meters (m)

$$E_{max} = 59.41 \text{ dBuV/m} = 0.000934 \text{ V/m}, d=3\text{m}, g_t=2$$

$$P_t = (E \times d)^2 / (30 \times g_t) = 0.1 \text{ mW} < 308 \text{ mW}$$

Therefore, excluded from SAR testing.
